

Did You Know

- The Environmental Protection Agency has classified secondhand smoke as a Class A carcinogen—a substance known to cause cancer.
- Secondhand smoke is the third leading cause of preventable death in this country, killing 53,000 non-smokers in the U.S. each year. For every eight smokers the tobacco industry kills, they take one non-smokers with them.
- Non-smoking sections do not eliminate non-smokers' exposure to secondhand smoke; the smoke does not remain in the smoking section. (U.S. Surgeon General 1986).
- Non-smoking restaurant workers inhale the equivalent of 1 1/2 to 2 packs of cigarettes a day where smoking is allowed.
- Smoke-filled rooms can have up to six (6) times the air pollution as a busy highway (Centers for Disease Control 1993).
- Cities which have passed 100% smoke-free policies have found no effect on restaurant sales.

What's in Cigarette Smoke

There are over 4,000 chemicals—including

Cancer Causing Agents

Nitrosamines
Crysenes
Cadmium
Benzo(a)pyrene
Polonium 210
Nickel
P.A.H.s
Dibenz Acidine
B-Nathylamine
Urethane
N. Nitrosomonicotine
Toluidine
