

PROGRAM SPOTLIGHT

REGIONAL LABORATORY

When we say "public health laboratory" we mean local, state, federal and territorial government laboratories focused on protecting the public's health. That includes laboratories performing human, environmental, animal and food testing to monitor for and detect health threats. LMAS Regional Laboratory proudly serves our Upper Peninsula communities as your local public health laboratory. We know that public health laboratory professionals are "ICONS", and we want to showcase their iconic work. So, roll out the red carpet, put on your biggest sunglasses and don a lab coat with satin lapels because September is Public Health Laboratory Appreciation Month.

LMAS Regional Laboratory is committed to providing high-quality, reliable laboratory testing services to support public health and individual well-being. Our clinical laboratory offers a range of diagnostic tests to detect respiratory infections, sexually transmitted infections, and other health conditions. Our environmental drinking water laboratory strives to ensure safe drinking water by performing tests for bacteria, nitrates, nitrites, and other potential contaminants that can affect water quality.
